

Staging (1-4): Defines current disease status. (1= Mildest, 4=Severest Periodontal Disease).

Grading: Defines predictability for tooth retention, with appropriate treatment, including analysis of risk factors for treatment success.

Potential risk factors include: Smoking, Diabetes, Age, Numbers of missing teeth, Loose teeth, Compliance with recommended treatment protocols, short and long term

- CODE Below:**
- OHI - Oral Hygiene Instruction.
 - OEA - Occlusal evaluation and adjustment, as needed.
 - SRP - Comprehensive Scaling and Root Planing with local anesthesia.
 - Re-eval. - Comprehensive re-evaluation, including charting 4-6 weeks following SRP.
 - PRT - Pocket Reduction Therapy. Usually provided by a periodontist or a dentist with advanced training in regenerative periodontal therapies.
 - LANAP/GTR - Guided Tissue Regeneration or LANAP. Usually provided by a periodontist or dentist with advanced periodontal training.

STAGING	GRADING	TREATMENT MAY INCLUDE
Stage 1. Early <input type="checkbox"/> Gingivitis, and localized Early Periodontitis	Grade 1. <input type="checkbox"/> Early to moderate risk, good prognosis predicted for all teeth	OHI, OEA, SRP, Re-eval.
Stage 2. Moderate <input type="checkbox"/> Localized Early to moderate Periodontitis. Dentition mostly intact	Grade 2. <input type="checkbox"/> Moderate risk, good prognosis predicted for most teeth	OHI, OEA, SRP. Possible Localized PRT and/or Localized LANAP/GTR.
Stage 3. Severe <input type="checkbox"/> Generalized Moderate to severe Periodontitis. Dentition mostly intact	Grade 3. <input type="checkbox"/> High risk. Prognosis may be guarded to poor for some teeth.	OHI, OEA, SRP, Re-eval, PRT, LANAP, GTR
Stage 4. Advanced <input type="checkbox"/> Generalized Includes missing teeth and at-risk teeth.		OHI, OEA, SRP, Re-eval, PRT, LANAP, GTR
